### Summary

A research survey to collect and conserve *Vigna* germplasm—mainly *Vigna nakashimae*—was conducted on Nakadorijima Island, Ukujima Island, and Nishisonogi Peninsula, Nagasaki Prefecture, Japan, in October 17–21, 2022. A total of 31 wild and weedy legume accessions were collected from 14 sites. On Nakadorijima Island, *Vigna angularis* (weedy), *Vigna angularis* var. *nipponensis*, *Glycine soja*, and *Canavalia lineata* were found at 4 of the 15 sites visited, but natural habitats for *Vigna nakashimae* were not found. On Ukujima Island, *V. nakashimae* was collected at 9 of the 10 sites visited; 6 of these sites were newly discovered native habitats. Only one site was visited in Nishisonogi Peninsula, where one accession of *Vigna angularis* (weedy) was collected. All of the collected seeds are being conserved and will undergo multiplication in the National Agriculture and Food Research Organization (NARO) Genebank. The propagated seeds will be used for research on tolerance to abiotic stresses, including salinity. These genetic resources will become available upon request for research or educational purposes.

KEY WORDS: *Vigna nakashimae*, Salt tolerance, Goto islands, Nagasaki prefecture

### Introduction

The wild relatives of *Vigna* crops may prove to be useful genetic resources for the adaptability to various harsh environments (Tomooka *et al.* 2014). *Vigna nakashimae* (Ohwi) Ohwi & Ohashi is one of the wild *Vigna* spp. that has high salt tolerance (Yoshida *et al.* 2016; Noda *et al.* 2022). Elucidating the salt tolerance mechanism of this plant may provide clues for solving salt damage, which is a major problem in agriculture

worldwide. The distribution of *V. nakashimae* covers China, Korea, and Japan, but its domestic distribution was only confirmed around the Goto Islands, Iki Island, and Hirado Island in Nagasaki Prefecture as well as the Amakusa area in Kumamoto Prefecture.

The National Agriculture and Food Research Organization (NARO) Genebank has been conducting a collection survey for the conservation of legumes containing *Vigna* germplasm distributed in Japan. The

domestic collection survey for *V. nakashimae* was conducted by Tomooka *et al.* (1998, 2013, 2015) and Takahashi *et al.* (2014). In this report, a collection survey of wild leguminous species—mainly *V. nakashimae*—was conducted to further enrich the genetic resources available in the NARO Genebank.

## Methods

A collection survey was conducted on Nakadorijima Island (Shinkamigoto, Minaminatsuura, Nagasaki), Ukujima Island (Sasebo, Nagasaki), and Nishisonogi Peninsula (Saikai, Nagasaki) in Nagasaki Prefecture, Japan, in October 17–21 2022 (Table 1). We used a ferry and speed boats to move between the islands and rental cars to move within each island.

We estimated the locations and topography of most collection sites on Google Maps in advance, whereas several additional sites were visited that seemed to be habitats of genus *Vigna* plants while traveling. As passport data, we recorded the names of the collection sites, the date of collection, the names of the collectors, latitude, longitude, altitude, location names, land use, soil type, habitat, associated plants, shading level, degree of disturbance, population size, state, and other ecological data. The latitude and longitude were estimated using Google Maps.

## Results and Discussion

During this survey, a total of 26 sites were visited, with leguminous accessions found in 14 of them (Fig. 1). A total of 31 accessions consisting of 24 accessions of *V. nakashimae*, 3 accessions of *Vigna angularis* (weedy), 1 accession of *V. angularis* var. *nipponensis*, 2 accessions of *Glycine soja*, and 1 accession of *Canavalia lineata* were collected during this survey (Table 2). The passport information for all collected accessions is shown in Table 3. Photos of the habitats at each site can

be found in Appendix 1, while photos of the collected seeds conserved in the NARO Genebank are shown in Appendix 2.

### Nakadorijima Island

We visited 15 sites along the coast of Nakadorijima Island from the northern to the central region, on October 18, 2022 (Fig. 1A). Most sites were grasslands in a park or abandoned paddy field (Photos 1–4). Wild legume species were only collected at four of the fifteen visited sites, including one accession of *V. angularis* var. *nipponensis*, one of *V. angularis* (weedy), one of *C. lineata*, and one of *G. soja* (Table 2).

*V. nakashimae* was not found in Nakadorijima Island in this survey. In a previous collection survey on Nakadorijima Island, only one accession of *V. nakashimae* was collected (Tomooka *et al.* 1999). Considering that we visited the same site with no success, we suggest that *V. nakashimae* cannot settle in this island, although seed migration may occur. According to the previous survey, *V. nakashimae* was distributed along coastal sunny grasslands; such grasslands in Nakadorijima Island are on steep slopes, where winds are very strong.

### Ukujima Island

We visited 10 sites along the coast of Ukujima Island, finding wild legumes at 9 of them (Fig. 1B). A total of 26 accessions were collected, comprising 24 accessions of *V. nakashimae*, 1 of *V. angularis* (weedy), and 1 of *G. soja* (Tables 2 and 3). The natural habitats of *V. nakashimae* had been reported in a previous survey (Tomooka *et al.* 2013), of which we confirmed four known habitats and discovered six new natural ones. All sites were characterized by sunny and flat grasslands with high disturbance (Photos 5–13). All *V. nakashimae* plants were entwined in grassy weeds approximately

Table 1. Itinerary of the field survey in Goto Islands, Nagasaki Prefecture

Date	Itinerary	Stay

Table 2. Summary of collected accessions on Goto Islands and Saikai city in Nagasaki Prefecture

Species	Nakadori	Uku	Saikai	Total
<i>Vigna nakashimae</i>	0	24	0	24
<i>Vigna angularis</i> (weedy)	1	1	1	3
<i>Vigna angularis</i> var. <i>nipponensis</i>	1	0	0	1
<i>Glycine soja</i>	1	1	0	2
<i>Canavalia lineata</i>	1	0	0	1
Total	4	26	1	31

30–50 cm tall, so we had to push the grass aside to find them. Green to black pods were observed at the nine collection sites, while flowering was observed at six of them.

#### Nishisonogi Peninsula

Only one site was visited in Nishisonogi Peninsula (Fig. 1C), where one accession of *V. angularis* (weedy)

was collected (Tables 2 and 3). We surveyed a wide area spanning approximately 100 x 100 m around the paddy field, finally finding the accession of *V. angularis* (weedy) in a shrub on the bank beside the irrigation canal (Photo 14).

All of the collected seeds were conserved and will undergo multiplication in the NARO Genebank. The propagated seeds will be used for research on tolerance

to abiotic stresses, including salinity. These genetic resources will be available upon request for research or educational purposes.

## 和文摘要

2022年10月18~20日に長崎県五島列島の中通島、宇久島および西海市にてヒメツルアズキを中心としたマメ科野生種の遺伝資源探索収集を行った。その結果、合計31品目の野生型および雑草型のマメ科遺伝資源を収集できた。中通島では15カ所のサイトを訪れた。そのうち4カ所で雑草アズキ (*Vigna angularis*)、ヤブツルアズキ (*V. angularis* var. *nipponensis*)、ツルマメ (*Glycine soja*) およびハマナタマメ (*Canavalia lineata*) を収集できたが、ヒメツルアズキ (*V. nakashimae*) の自生地の発見には至らなかった。宇久島では10カ所のサイトを調査し、その内9カ所でヒメツルアズキを収集できた。うち6カ所は新規に発見した自生地であった。西彼杵半島では1サイトのみ調査し、雑草アズキを1系統収集できた。収集したすべての系統をジーンバンクに遺伝資源として登録・保存した。増殖した種子は今後耐塩性機構に関する研究材料として使用する計画である。また研究材料や教育資料として一般に配布可能となる予定である。

## Appendix 2

Sample Photo 1.  
JP287676 (Nakadori 1-1\_2022),  
*Vigna angularis* (weedy)

Sample Photo 2.  
JP287677 (Nakadori 2-1\_2022),  
*Canavalia lineata*

Sample Photo 3.  
JP287678 (Nakadori 3-1\_2022),  
*Vigna angularis* var. *nipponensis*

Sample Photo 4.  
JP287679 (Nakadori 4-1\_2022),  
*Glycine soja*

Sample Photo 5.  
JP287680 (Uku 1-1\_2022),  
*Vigna nakashimae*

Sample Photo 6.  
JP287681 (Uku 1-2\_2022),  
*Vigna nakashimae*

Sample Photo 7.  
JP287682 (Uku 1-3\_2022),  
*Vigna nakashimae*

Sample Photo 8.  
JP287683 (Uku 1-4\_2022),  
*Vigna nakashimae*

Sample Photo 9.  
JP287684 (Uku 1-5\_2022),  
*Vigna nakashimae*

Sample Photo 10.  
JP287685 (Uku 1-S1\_2022),  
*Glycine soja*

Sample Photo 11.  
JP287686 (Uku 2-1\_2022),  
*Vigna nakashimae*

Sample Photo 12.  
JP287687 (Uku 3-1\_2022),  
*Vigna nakashimae*

Sample Photo 13.  
JP287688 (Uku 3-2\_2022),  
*Vigna nakashimae*

Sample Photo 14.  
JP287689 (Uku 3-3\_2022),  
*Vigna nakashimae*

Sample Photo 15.  
JP287690 (Uku 4-1\_2022),  
*Vigna angularis* (weedy)

Sample Photo 16.  
JP287691 (Uku 5-1\_2022),  
*Vigna nakashimae*

Sample Photo 17.  
JP287692 (Uku 5-2\_2022),  
*Vigna nakashimae*

Sample Photo 18.  
JP287693 (Uku 5-3\_2022),  
*Vigna nakashimae*

Sample Photo 19.  
JP287694 (Uku 6-1\_2022),  
*Vigna nakashimae*

Sample Photo 20.  
JP287695 (Uku 6-2\_2022),  
*Vigna nakashimae*

Sample Photo 21.  
JP287696 (Uku 6-3\_2022),  
*Vigna nakashimae*

Sample Photo 22.  
JP287697 (Uku 7-1\_2022),  
*Vigna nakashimae*

Sample Photo 23.  
JP287698 (Uku 7-2\_2022),  
*Vigna nakashimae*

Sample Photo 24.  
JP287699 (Uku 7-3\_2022),  
*Vigna nakashimae*

Sample Photo 25.  
JP287700 (Uku 8-1\_2022),  
*Vigna nakashimae*

Sample Photo 26.  
JP287701 (Uku 8-2\_2022),  
*Vigna nakashimae*

Sample Photo 27.  
JP287702 (Uku 8-3\_2022),  
*Vigna nakashimae*

Sample Photo 28.  
JP287703 (Uku 9-1\_2022),  
*Vigna nakashimae*

Sample Photo 29.  
JP287704 (Uku 9-2\_2022),  
*Vigna nakashimae*

Sample Photo 30.  
JP287705 (Uku 9-3\_2022),  
*Vigna nakashimae*

Sample Photo 31.  
JP287706 (Saikai 1-1\_2022),  
*Vigna angularis* (weedy)
