### Summary

A collaborative exploration between Japan and Myanmar for collecting legume germplasm was conducted in the Shan state and the Mandalay division of Myanmar from February 23 to March 16, 2002. Many kinds of legumes are cultivated in Myanmar. Especially, the Sagaing division and the east region of the Shan state are the main production areas for *Vigna* species, soybean and chickpea and these regions are rich in food legume germplasms. In this exploration, we collected 215 food legumes, including *Arachis hypogaea*, *Cajanus cajan*, *Cicer arietinum*, *Glycine max*, *Lablab purpurea*, *Lens esculenta*, *Pachyrhizus erosus*, *Phaseolus lunata*, *Phaseolus vulgaris*, *Pisum sativum*, *Psophocarpus tetragonolobus*, *Vicia faba*, *Vigna radiata*, *Vigna mungo*, *Vigna unguiculata* and *Vigna umbellata*. Some varieties of

major legumes such as *Vigna* species, soybean and chickpea were replaced by improved varieties. Landraces of legumes in Myanmar will be replaced by improved or introduced varieties soon. We could not collect any wild legumes because our exploration was conducted in dry season.

**KEY WORDS:** food legume, landraces, collection, exploration, Shan state, Mandalay division, Myanmar

## 1. 目的

ミャンマーは北緯 9° 58′ ~28° 31′ , 東経 92° 9′ ~101° 10′ に位置し, インド, 中国, ラオス, タイと国境を接する国で, 西部や北部, 東部地域は標高 915~2,134mの高地が広がっている. 気候分布は熱帯から亜熱帯で<sup>1)</sup>, 季節は雨季 (6~10月), 冬季 (11~2月), 夏季 (3~5月) に分けられている<sup>6)</sup>. 多民族国家であることから習慣や食文化も様々で, 栽培される食用マメ類の種類は多く, *Vigna* 属をはじめとする多種類のマメ類の遺伝的多様性が高い地域と考えられている<sup>2)</sup>. 一方, 商業活動が活発になるにつれ, タイやインド, 国際半乾燥熱帯地域作物研究センター (International Crop Research Institute for Semi-Arid Tropics : ICRISAT) などから改良品種が導入されつつあり, これまで維持されてきた食用マメ類の多様性崩壊が危惧されている. 他方, Yezin では JICA の協力のもとシードバンクプロジェクトが進められているが, ミャンマー独自の遺伝資源収集は少なく, また, 政情の不安定と外国人の入域制限のため, 海外との共同収集も進んでいない<sup>2)</sup>.

そこで本探索では食用マメ類の多様な遺伝資源の存在が期待できる Shan 州及び Mandalay 管区内における食用マメ類の在来種や野生種をミャンマー中央農業研究所シードバンクと共同で調査, 収集した.

## 2. 調査地選定と調査収集方法

ミャンマーには多くのダイズ発酵食品があり<sup>4)</sup>, タイと国境を接する Shan 州では納豆などに利用される小粒ダイズの栽培が盛んであることから, ダイズ (*Soybean, Glycine max* (L.) Merrill) の遺伝的多様性が期待できる. また, インドからミャンマーにかけての地域はリョクトウ (*Green gram, Vigna radiata* (L.) Wilczek) やケツルアズキ (*Black gram, Vigna mungo* (L.) Hepper) の原産地とも考えられており<sup>3)</sup>, これらマメ類の遺伝的多様性も高いと思われた. そこで, Shan 州及び Mandalay 管区内のうちミャンマー当局から入域を許可された地域について, 食用マメ類遺伝資源の調査, 収集を行った. 具体的には, 郡単位で配置されているミャンマー農業公社 (Myanmar Agriculture Service : MAS) のタウンシップ・オフィス (日本の農業改良普及セン

ターに相当する組織)を訪問し、タウンシップ・マネージャーから食用マメ類の栽培情報を収集し、スタッフの案内のもと栽培農家に出向き調査、収集を実施するのを基本とした。また、調査拠点周辺及び移動中に立ち寄ったマーケット(市場)などでも調査、収集を行った。聞き取り調査では作期や特性、栽培履歴などの情報を収集するように努めた。本調査収集は冬季後半から夏季前半にかけての季節であったことから、当地域の大部分のマメ類は作期ではなかった。そのため収集の大部分は農家の蔵などに保存してあったものである。また、ヒラマメ(Lentil, *Lens esculenta* Moench)やフジマメ(Lablab bean, *Lablab purpurea* (L.) Sweet)の一部については農家の圃場や軒下で成熟に達していたものを採種して収集した。なお、調査、収集のための移動手段はすべて車である。

### 3. 調査結果

探索収集ルートをFig. 1に、探索旅行の日程をTable 1に示した。本探索ではShan州の西部及びMandalay管区の比較的標高の高い(海拔1,000m前後)地域を中心に食用マメ類の遺伝資源を収集した。まず、Nyaungshwe市を拠点にしてインレー湖周辺の探索を行った。次いでTaunggyi市、Pindaya市、Kalaw市を拠点に探索したが、この間には予定していたHsi Hseng市、Lawksawk市、Indow市にはミャンマー当局の指示により入域することはできなかった。探索後半はMandalay管区に場所を移し、標高の低いMandalay市及び標高の高いPyin Oo Lwin市(海拔1,000m前後)を拠点に収集を行った。

本探索において合計215点の遺伝資源を収集した。その内訳はTable 2に示す16種の食用マメ類で、ダイズ(41点)が最も多く、次いでインゲンマメ(French bean / Kidney bean, *Phaseolus vulgaris* L.) (40点)、ライマメ(Lima bean, *Phaseolus lunata* L.) (25点)、ササゲ(Cowpea, *Vigna unguiculata* L.) (20点)、タケアズキ(Rice bean, *Vigna umbellata* Thunb.) (19点)、フジマメ(Lablab bean, *Lablab purpurea* L.) (17点)の順となった。野生種は乾季でもあったことから目にすることはできず、収集できなかった。

#### 1) ラッカセイ (Peanut, *Arachis hypogaea* L.)

ラッカセイの栽培面積は約45万haで、Mandalay, Magwe, Sagaing管区とShan州では雨季に、Ayeyarwadyデルタ地域では冬季に栽培される<sup>6)</sup>。ラッカセイは重要な油量作物で、油のほか料理やスナックに利用される。

#### 2) キマメ (Pigeon pea, *Cajanus cajan* L.)

キマメの栽培面積は約24万haで、ミャンマーにおいては3番目に重要なマメ科作物として位置づけられ

ている。栽培地域は主として中央乾燥地帯の Sagaing, Mandalay, Magwe 管区で雨季に栽培される<sup>6)</sup>。収集した14点のキマメのうち13点はShan州で収集したもので、それらの大部分は在来種であったが、なかには改良種もみられた。キマメの病害虫としては莢や葉を食害する害虫 (pod borer, leaf roller, leaf minor) やアブラムシによる被害がある。種皮色は白や褐の単色のもの、白または淡褐に褐色の斑点があるものがみられた。

### 3) ヒヨコマメ (Chick pea, *Cicer arietinum* L.)

ヒヨコマメの栽培面積は約11万haで、Sagaing, Mandalay, Magwe, Bago, Ayeyarwady 管区で主として栽培されている<sup>6)</sup>。収集した7点のヒヨコマメのうち、5点はShan州の農家及びマーケットで収集した。残り2点はICRISATから導入されたもので、Mandalay 管区のMAS オフィスで収集した。ヒヨコマメはきなことして、スープに入れるなどして利用されている。今回収集したShan州, Mandalay 管区では特に病害は問題になっていなかった。

### 4) ダイズ (Soybean, *Glycine max* L.)

ダイズのことを「Pe Poke (ペポ)」という。ダイズの栽培面積は約8万haで、全栽培面積の約46%は標高が約1,000mに位置するShan州で雨季に栽培される<sup>6)</sup>。また、Sagaing, Mandalay, Bago 管区とKachin州でもダイズが栽培されるが、これらの地域では冬季に栽培されている<sup>6)</sup>。本探索で収集した41点のうち16点はMAS オフィスから収集したもので、これらはICRISATから導入されたもので、導入のための試作試験を進めているようである。残りの25点は農家及びマーケットで収集したもので、このなかには改良種もみられる。ダイズは豆腐、納豆の原料であり、納豆は日本の納豆に似たものや強烈な臭いのするせんべい状乾燥納豆が売られていた。種皮色は黄白のものが多いが、なかには淡緑、緑のものもみられた。また、粒大は極小粒から中粒のものまでであった。アブラムシが一部で発生するが、その他に子実食害害虫 (pod borer) が多くみられた。

### 5) フジマメ (Lablab bean, *Lablab purpurea* (L.) Sweet)

フジマメは農家の庭の片隅で家庭菜園的な感覚で栽培されているようである。収集したすべてが在来種で、そのほとんどは古くから栽培されているものであった。種皮色は黒、白、褐のものがみられた。成熟した子実、若莢を利用している。

### 6) ヒラマメ (Lentil, *Lens esculenta* Moench)

ヒラマメはマイナーなマメ類で、Sagaing 管区が栽培の中心である<sup>6)</sup>。本探索ではShan州インレー湖の西部地区で3点収集した。ヒラマメは煮物に入れられる。

#### 7) クズイモ (*Yam bean, Pachyrhizus erosus* (L.) Urban)

クズイモはマメ科作物のなかでは珍しくデンプンや糖に富んだ塊根を利用する熱帯地域の食用作物であり、中国や東南アジアでは野生化している<sup>5)</sup>とされている。本探索では1点収集するとともに、Mandalay市のマーケットで塊根が売られているのを目にすることができた。クズイモはミャンマーでは「Ice bean」と呼ばれていた。

#### 8) *Phaseolus* 属

*Phaseolus* 属マメ類として、ライマメ (*Lima bean, Phaseolus lunata* L.) 25点、インゲンマメ (*French bean / Kidney bean, Phaseolus vulgaris* L.) 40点を収集した。これらのマメ類はMandalay管区、Sagaing管区で比較的多く栽培されているが、ミャンマーで栽培される食用マメ類全体からみるとマイナーな作物である<sup>6)</sup>。インゲンマメはインレー湖では浮き草によってつくられた浮島で栽培され、また、ジャガイモとの間作もされているようである。これら *Phaseolus* 属マメ類は成熟した子実が利用されるが、インゲンマメでは若莢も利用されている。本探索で収集した *Phaseolus* 属マメ類は比較的古くから栽培されているものが多かった。

#### 9) エンドウ (*Garden pea, Pisum sativum* L.)

エンドウもマイナーなマメ類で、主な栽培地はMagwe, Sagaing管区となっている<sup>6)</sup>。エンドウは子実のほか若莢を利用している。本探索では9点のエンドウを収集した。一部改良種もみられたが、その多くは古くから栽培されている在来種であった。

#### 10) シカクマメ (*Winged bean, Psophocarpus tetragonolobus* (L.) DC.)

シカクマメはインドから東南アジアで広く栽培されている<sup>5)</sup>。本探索ではShan州のインレー湖東部からTaunggyi市にかけての地域で3点収集した。若莢と塊根を利用する。

#### 11) ソラマメ (*Broad bean, Vicia faba* L.)

Shan州インレー湖の北部にあるTaung Po Koe Lone村のマーケットで1点収集した。若莢及び子実を利用している。

#### 12) *Vigna* 属

リョクトウ (*Green gram, Vigna radiata* (L.) R. Wilczek) は約54万haの作付けがありYangon, Bago, Magwe, Mandalay, Sagaing管区が主な栽培地域で、ケツルアズキ (*Black gram, Vigna mungo* (L.) Hepper) は約48万haに作付けられ、Ayeyarwady, Yangon, Bago管区が主要産地となっている<sup>6)</sup>。また、ササゲ (*Cow pea, Vigna unguiculata* (L.) Walp.) は約8万haの作付けがあり、Magwe, Yangon, Bago, Mandalay, Ayeyarwady管区が主な栽培地となっている<sup>6)</sup>。リョクトウとケツルアズキがミャンマーにおける食用マメ類のなかで最も重

要な位置を占めるなど、*Vigna* 属食用マメ類の栽培がかなり多い。本探索ではケツルアズキ5点、リョクトウ5点、タケアズキ (Rice bean, *Vigna umbellata* (Thunb.) Ohwi et Ohashi) 19点、ササゲ20点を収集した。ケツルアズキやリョクトウは麵(春雨) やもやし原料、タケアズキは食材のほか緑肥や家畜の飼料として利用される。またササゲは子実のほか若莢も利用される。これら *Vigna* 属マメ類は古くから栽培されている在来種が大部分であったが、リョクトウにおいては改良種や導入品種が多かった。

#### 4. 所感

探索は全般に順調に進み、ダイズ、*Vigna* 属など主要なマメ類のほか、クズイモなどわが国では馴染みの薄いマメ類についても収集することができた。これにはミャンマー当局、ミャンマー農業公社の協力の賜である。しかし、Hsi Hseng 市、Lawksawk 市、Indow 市周辺へは「安全保証」を理由に入城することができず、本探索がごく限られた地域の調査収集活動となってしまったことは残念であった。また、本探索は11月-12月の予定であったが、実際には2月-3月に実施した。そのため、今回訪れたShan州、Mandalay管区ではマメ科作物の大部分が作期ではなく、ほとんど立毛をみることはできなかった点は残念であるが、種子の収集という点からはむしろ好都合であった。

リョクトウなどの *Vigna* 属、ダイズ、ヒヨコマメなどミャンマーの主要食用マメ類とされているものについては、一部ではあるが改良品種導入が進んでいる。また、ICRISAT などからの導入も図られようとしており、ミャンマー農業公社ではこれら導入種の試作を行っていた。ダイズなどでは油料原料として生産拡大を図る向きもあるため、改良種の導入が進められ、将来在来種が消失していく可能性が大きいと思われる。ミャンマー国におけるマメ類育種事業や海外からの導入が本格化する前に、今回入城出来なかったShan州の東部(タイとの国境周辺) 地域や *Vigna* 属マメ類の栽培が多いSagaing管区などにおけるマメ類収集を急ぐ必要があるだろう。

最近ミャンマーでは種子法が整備され、遺伝資源などの国外持ち出しにあたっては、その遺伝資源の取り扱いに関する同意書にサインすることが義務づけられた。また、植物防疫所とシードバンクの考え方に違いがあるためか、遺伝資源持ち出しの手続きに混乱が生じた。すなわち、本探索では当初、シードバンクの許可が下りれば遺伝資源の国外持ち出しができるということであったが、収集を終えシードバンクに戻った時点では、やはり植物防疫所の許可が必要ということになっていた。本探索ではこういったことから終盤やや混乱に陥り、十分な種子整理ができないままでの出国となった。今後はこういう状況にも注意しておく必要がある。

## 5. 謝辞

今回の探索実施にあたってご尽力いただいた、ミャンマー国農業灌漑省、ミャンマー農業公社、同中央農業研究所、JICA ミャンマーシードバンクプロジェクト及び農業生物資源研究所ジーンバンクの関係各位に心から感謝の意を表したい。
